Do we have **Permission to do any extraction's** the doctor determines necessary for your pets health while we are doing this procedure (There is an additional charge for extractions, this varies from a minor extraction or a major extraction) Yes _____ No _____

Any procedure requiring sedation or anesthesia carries with it an inherent risk regardless of the particular procedure involved. The safety of modern anesthesia has increased substantially with the increased knowledge, modern equipment, and modern anesthetic drugs. Anesthesia is, however, never trivial or routine. To help us choose the appropriate anesthetic, we recommend a **Preanesthetic Blood Profile**. This includes the following tests: blood cell counts to detect anemia, liver function test, Kidney Function Test, Blood Coagulation test, and Glucose level. These tests are performed as a standard safety screen. We also recommend **Intravenous Catheter and intra-operative fluids** to maintain adequate blood pressure and kidney function. The catheter also provides direct vascular access should prompt medical intervention be needed in an emergency. The hair on the leg will be clipped for aseptic insertion of the catheter.

Please initial your selection on these additional services, which are recommended but not mandatory:

_____ Yes, I want my animal to have the Blood Profile

_____ No, I understand the risk but decline the Blood Profile

_____ Yes, I want my animal to have the Intravenous Catheter and Fluids

_____ No, I understand the risk but decline the Intravenous Catheter and Fluids

Our staff is concerned about the comfort of your pet at our hospital and when they return home. Even though your pet may have a higher threshold of pain than you, they do experience pain to a great degree. We can administer an injection of Pain Medication just after surgery to relieve their discomfort and send home medication for the first few days after surgery. This medication is similar to what you might receive in the hospital from your doctor. We also recommend post op Antibiotics to prevent secondary infections.

Please initial your selection on these additional services, which are recommended but not mandatory:

_____ Yes, I want my animal to have the post op Pain Injection

_____ No, I decline the Pain Injection

_____ Yes, I want my animal to have the Pain Medication at home
